

FIELD OBSERVATION PREP GUIDE TEAM #: 12

YOUR NAME: Social

WHO/ WHERE:

Identify who or what you will observe and where the observation will take place. Describe the context and why this environment or group is relevant to your research focus.

UC Berkeley Students -

Context: Strada is a social environment on campus that will allow us to see different types of conversation & connection people have socially

WHAT:

Clarify what you are curious to learn or notice during your fieldwork. Define your learning goals—what behaviors, interactions, or environmental factors you want to understand.

The process of GenZ social interaction within a college community

- what drives certain groups of people to come together
- what a weekday looks like socially on a social campus environment

LOGISTICS:

Date / Time:

10/14 Tues 10:30am to 12pm

Location:

Caffe Strada

Who is Observing (each team member must attend at least one field observation to receive credit):

Breanna, Allison, Neha

Any Permissions or Preparation Needed:

None

OBSERVATION FOCUS:

List the main things you'll pay attention to during your observation. Think of these as prompts to guide your attention—such as routines, emotions, workarounds, or environmental cues—rather than a checklist.

People: the variety/diversity of people there (archetypes - studying, clubs, friends, etc.), how comfortable people are (body language), how many people came (alone vs group), if the people know each other from somewhere/familiarity

Objects: Frequency of "Phone Pick-Ups", table set up, study materials, backpacks/school bags,

Environment: Decibel level of environment (how loud conversations are), opening doors for other people (time constraints, age, etc.), indoor vs outdoor, purpose of meeting

Message: Topic/type of conversations (friendly, work, etc.)

Service: Drinks, pastries, third space to meet

TOOLS/ METHODS:

Note the tools or methods you'll use to capture what you observe, such as field notes, sketches, or photos (if permitted). Reference the readings to choose approaches that help you see before interpreting.

- Field Notes
 - taking notes on our collaborative meeting notes
 - recording audio of sound level (energy)
- Online tools
 - Google Docs, Camera App, Voice Memo
- Sketches
 - table set ups - sitting alone vs together
- Photos (with permission)
 - image sorting to understand patterns

POST-OBSERVATION NOTES

Note the tools or methods you'll use to capture what you observe, such as field notes, sketches, or photos (if permitted). Reference the readings to choose approaches that help you see before interpreting. Do this right after your field observation so it is fresh in your mind.
